

DFAS Doctrine: The Foundational Framework for Doctrinal Financial Science

Hasan Mohamed Husain Alaali

May 23, 2025

Doctrinal Model Integration Disclosure

All financial models created under, derived from, or functionally dependent on the Alaali Financial Models Framework (AFMF) or its underlying doctrinal structure—whether directly or indirectly—are doctrinally classified as part of AFMF, regardless of the identity of the developer.

This includes, but is not limited to:

- Models that use DFAS engine outputs as inputs, foundations, or structural modifiers
- Models that replicate or extend AFMF logical architecture, model derivation logic, or simulation protocols
- Frameworks that incorporate DFAS-FEP governance, classification, or calibration mechanisms

By structural design, all such models fall within the intellectual and doctrinal boundaries of AFMF and are subject to DFAS authorship enforcement.

- No derivative may be classified as “independent” if it integrates DFAS logic or structure
- Attribution to AFMF is required regardless of naming, authorship claim, or modification

This disclosure establishes legal and institutional clarity for derivative classification and intellectual boundaries. Any use of DFAS or AFMF logic constitutes acceptance of this integration policy.
